

How to link Matters to Contacts to copy a Matter field's content to a Contact field

Settings

In order for a Matter field to be copied automatically to a Contact field, the Mat Ref must be completed in the Contact Form.

Also, the two fields need to be Matched using these steps in the Contact Form. The automatic copying only happens when the Matter field, in this example, Trigger, is manually changed in the Matter Form. Using Process / Change Records will not cause the update to work.

In this example, the **Trigger box** of the Contact record will be checked if the **Trigger box** is clicked in the Matter field for the Aamond client and matter.

Right-click. Choose: Customize Field

1. Right-click on the 'MatRef' field in the Contact Form.

2. Click 'Set Field Links' in the 'Field Properties - Contact' dialog.

3. Click 'Link Options' in the Contact Form.

4. Click 'Match' in the 'Link Options' dialog.

5. Click 'Trigger' in the 'Fields in Lookup Record' list.

6. Click 'Match' in the 'Link Options' dialog.
